-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
 Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE THREE MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese 05-75485 (Kawasaki hereafter) in view of Pescher.

Kawasaki discloses tube rolling such as that of the invention in which the position of both ends of the roll axes controlled separately and individually. The position control is performed on the basis of cylinder pressure measurements.

Pescher discloses rolling in which the position of both ends of the roll axis are individually adjustable in response to measured thickness of the product in order to overcome thickness deviations across the width of the strip.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide adjustments of the Kawasaki roll ends in response to measured thickness deviations, following the suggestion of Pescher, in order to obtain uniform dimensions of the product.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Foren and McCarthy further show the state of the art.
